

benefits of aluminum

Aluminum is recognized for its excellent weathering characteristics, resulting from its strength and resistance to oxidation. For wet, marine-based applications, aluminum structural materials are the most effective way to achieve a durable, long lasting assembly. Further, aluminum requires no protective coatings such as primer, paint or stain which promotes a healthy marine environment and eliminates costly routine maintenance.

In addition, we exclusively use stainless steel hardware and proprietary HDPE and UHMW-PE plastic auxiliary components to ensure our docks and gangways remain uniquely attractive and strong for many years. For decking, we offer our highly durable AridDek aluminum decking, composite decking, and IPE tropical hardwood, each of which provides uniquely attractive weathering characteristics and require no maintenance.

As you can tell, we take painstaking efforts to ensure our docks remain strong and maintenance free for many years. **Enjoy.**

How did we become North America's largest manufacturer of aluminum boat docks?

Simple. Wahoo Docks uses proprietary components, patented designs and we manufacture our products to exacting standards in a controlled environment. We maintain the largest, most knowledgeable local dealer network in the United States to assist with design considerations, material selection, regulatory approval, installation expertise and personalized customer service. In short, we build the best dock, keep our customers at the center of our efforts, and most importantly—**we deliver exactly what you expect, when you expect it, every time!**

discover the difference

Wahoo Docks has been building the finest quality dock systems for over 25 years and pioneered the heavy framed aluminum dock over a decade ago. Today, Wahoo stands as the largest builder of residential boat docks in North America and is represented by a network of local dealers that embody the most talented dock professionals in the industry. We are recognized for building the highest quality dock systems available with emphasis on strength and durability, aesthetic appeal, and low maintenance.

To achieve this honor, we take great effort to design each and every dock with the most sophisticated design parameters, striving for the optimal balance between strength and economy. We use only the most ideal component materials, such as aluminum and stainless steel to maximize strength and minimize maintenance. We continue to lead all dock companies on stylistic measures, incorporating over 35 proprietary castings and extrusions in our docks to create a 'finished' appearance unlike any other.

customer support

We work hard at creating an exceptional, personal buying experience.

Our customers expect a great deal when they purchase a Wahoo dock and our entire organization is focused on ensuring that each client is well informed and that our customer service and products exceed expectations. In addition, our state of the art scheduling and operational systems allow us to have a remarkable on-time delivery record in an industry that is notorious for unreliability.

In short, Wahoo Docks proudly delivers a great product, at a great value and we support our customers with the highest level of professionalism, diligence, and expertise.

local craftsmanship

A key ingredient to our success is the collaborative effort within the Wahoo Docks team. Our docks are sold exclusively through a network of certified dealers throughout the country that are equipped with an

unparalleled level of knowledge and skill and the cumulative experience from the largest dealer group in the industry. In addition to the impressive background of each of our dealers, continued education is maintained through factory trips, annual network-wide meetings and written tests. You can be confident that your local professional is an expert in dock design and construction, regional regulatory issues and knows the latest installation and anchoring practices.

These representatives are charged with understanding the vision and goals of their customers and ultimately ensuring their complete satisfaction. To this end, we work closely with our partners to support their customer service efforts and provide insight on the latest technical and structural advances on our dock systems.

Our approach is to deliver the benefits of a superior product—designed by experienced engineers, built in a controlled environment with proprietary components—with outstanding service that is best achieved by local craftsmen with in-depth regional knowledge.

our docks

Each and every Wahoo dock is designed using a combination of our advanced engineering principles and decades of practical dock building experience. Our docks and gangways can be found throughout North America—in the freshwater lakes of Washington, the Atlantic coast of Virginia, Lake Pontchartrain in Louisiana, and most every other major body of water in the United States. We build floating docks for fluctuating reservoir lakes and fixed piling docks on the coasts and other fixed level bodies of water. In addition to manufacturing residential docks, we are also a leading provider of community docks to developers and our marinas can be found nationwide.

As you may imagine, we can deliver a wide range of looks and layouts to satisfy any taste. However, each dock that carries the Wahoo name will be as durable and maintenance free as the last. Our mission is to deliver each dock and gangway as a custom waterfront solution that offers the highest value and this concept is intrinsic in every design.

Whether you are seeking an economical swim platform for a canal-side home in California or a two-story multi-slip dock for a major lake in Georgia, we hope you give a Wahoo Docks representative the opportunity to show you our world class customer service!
