

*Wahoo Swing Mooring Pontoons* are a unique, patented mooring device that allow two vessels to be moored in the same area traditionally required for one vessel; doubling the capacity of mooring areas or enabling the same number of vessels to be moored in half the area they presently occupy.

Wahoo Swing Mooring Pontoons (SMPs) are a patented, award winning platform design that relates to boat moorings in rivers, lakes and harbors that require a circular area known as "swing moorings."

Wahoo SMPs allow a greater number of vessels to be moored in a given area thereby enhancing the revenue potential of the moorings. Alternatively, they can be employed to reduce the area occupied by a given number of moored vessels for navigational, environmental or planning reasons.

Wahoo SMPs can be used as a permanent installation or, because they can be easily transported and installed can be used as a temporary marina for yacht races, fishing contests or other aquatic events.

Wahoo SMPs vary in size to accommodate vessels of different length and beam and can be used alone or configured in "pods" to berth 4, 8 or more boats in one grouping. The patented design provides for a stable perch whether used alone or with two or more connected together.

## Advantages OF WAHOO SWING MOORING PONTOONS (SMPs)

- Allow two vessels to be moored within the swing area traditionally required by one vessel, doubling the mooring capacity
- Enables the same number of vessels to be moored in half the area they presently occupy
- Creates greater lanes for navigation in crowded mooring areas without effecting the established ceilings for vessel numbers
- Reduces the damage to sensitive marine environments caused by mooring apparatus
- Can provide temporary moorings for yacht races, fishing contests, boat shows and major aquatic events
- Offers marine authorities, marina operators and clubs a means to reduce existing waiting lists and provides an ongoing opportunity to restructure swing mooring areas
- **Increases revenue without facility overhaul or expansion**

Winner of the Australian Marine Industries Federation, Australian Marine Award for *"New and Innovative Product."*
