Driftwood

Spanish Red

Durability: Our stone-coated steel roofs stand up to hailstones, snow loads and extreme wind conditions without any structural or cosmetic damage. Each stone-coated steel roof carries a Class 4 impact-resistant rating against hail. That's one reason our weatherproof warranties include a 2.5-inch hailstone warranty and a 120 mph wind warranty—equivalent to an F2 tornado!

Strength: Our stone-coated roofing systems can be walked on without breaking or cracking, unlike concrete and clay roofs. Care should be taken not to walk on the raised rib portions of the panel.

Warranty: Our stone-coated steel roof comes with impressive warranties, including a 120 mph wind warranty and a 2.5-inch hailstone warranty, which is non-prorated for the owner's lifetime.

Investment: The initial cost of installing a stone-coated steel roof may be more than with the typical steel panel roofing that is common on boat docks. However, the unmatched aesthetics and durability of the product promises to make it an exciting option for many dock owners.

Classic Tile Stone-Coated Steel Roof Panels

Classic Tile is a stone-coated steel roof that protects against harsh weather conditions including blizzards, tornadoes, moderate hail and fire. The roof system is as attractive as traditional S-shaped Mission (Spanish) tile, but lighter weight than clay or concrete versions, while providing unmatched protection against the most extreme weather.

Each stone-coated steel roof panel is made from high-quality, 26-gauge Galvalume galvanized steel, coated with an acrylic basecoat. The basecoat uses proprietary resins to promote lifetime performance in all climates. The stone chips used in the stone coating are non-oiled natural granite granules that improve adherence to the basecoat while enhancing the appearance of panels. Finally, a clear acrylic over-glaze is applied and baked on. This provides a dock with long-lasting, durable and fade-resistant protection.

Product Details

- Non-combustible steel
- Lighter than traditional terra cotta tiles
- Re-roof or new roof applications
- Warranted against 2.5" hail stones
- Guaranteed not to crack, curl or rot
- Warranted against winds up to 120 mph

Dimensions

- Panel Width : 16.5"
- Panel Length : 45"
- Pieces / Square : 22.6
- Weight (sq.ft.): 1.32 lbs
